

Enriched Air Diver Specialty

Have you ever surfaced from a dive and couldn't wait to be done with your surface interval?

Diving on Enriched Air can help extend your dive time and return to the water faster! The PADI Enriched Air Diver Course is PADI's most popular specialty, and it's easy to see why. Scuba diving with enriched air nitrox gives you more no decompression dive time. You get more time underwater, especially on repetitive scuba dives.

You can typically stay down longer and get back underwater sooner. No wonder many divers choose this as their first specialty!

This course also counts as one more step toward your Master Scuba Diver Certification...the highest level of recreational certification you can attain!!!

Start learning now with PADI's home-study materials—the Enriched Air Diver eLearning. Our instructors will also answer any questions you have along the way and check your progress to make sure you understand important scuba diving information.

Our Enriched Air Nitrox course includes the following:

One Classroom Session

Enriched Air Diver eLearning

Enriched Air Diver Specialty Certification

Certification e-Card
